

Technology Expense Management

Expense Management Simplified.

With the increasing reliance on communication and productivity solutions, organizations are spending more during and after their digital transformation, but that doesn't have to be the case. TEM at Calero means gathering, analyzing, tracking, and optimizing expenses related to traditional Telecom, Mobility, UCaaS, and SaaS expenses, at whatever stage organizations are in within their digital transformation. Effective TEM can lead to significant cost savings, increased efficiency, and improved productivity for businesses of all sizes.

Digital Transformation

- **Inventory:** Knowing what you have and where it resides is essential to assess your network, and plan and carryout your **digital transformation strategy**
- **Benchmarking:** Negotiate better deals with suppliers, resulting in **cost savings**
- **Quote and Order Management:** Streamline your transformation process with the quote-to-order workflow that **reduces costs and provides visibility** into the entire procurement process

Automation

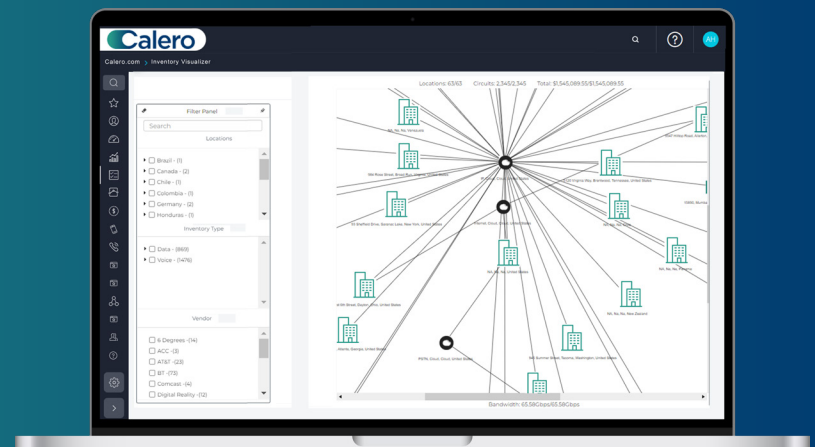

- Calero invoice data gathering, loading and processing is automated using AI, ML, and RPA, allowing invoices to be **tracked and paid on time** and automatically flagging discrepancies and inefficiencies
- Automated provisioning enables the exchange of information quickly, accurately, and securely, **reducing time to value, decreasing costs, and increases the success rate** of fulfilled orders. Calero is the industry leader in vendor electronic bonding (eBonding)

Employee Experience

- Industry-leading analytics gives employees **self-serve access to all data**, getting out of spreadsheets and into one intuitive system employees can act on
- Every element of the TEM system is connected by **one database and user experience**, increasing user satisfaction and adoption
- Elevate the team's experience by streamlining repetitive tasks, freeing up time for employees to **focus on higher-value work**. Calero **increases team productivity** and reduces errors and delays

Feature Spotlight: Network Visualizer & Inventory Delta View

- Fastest inventory implementation in the industry, taking hours instead of months
- Normalizes and standardizes vendor info to ensure synchronization within Calero.com
- Easily accessible inventory with drilldown in a single pane of glass
- Fast, accurate, regular automatic updates provides current state of inventory and services
- Reduces manual comparison of inventory in systems through automation
- Compares and rectifies differences between vendor inventory data and Calero.com records

Solution Features

Quote and Order Management: Seamlessly submit requests for proposals to obtain quotes from vendors, evaluate and compare quotes, negotiate pricing and terms with vendors, place orders with the best offers, and track orders through delivery and install, all within one system and workflow.

Contract Management: Negotiate contracts, track contract expiration dates and renewals, identify opportunities to optimize, and ensure that the services being provided follow the agreed-upon terms and conditions.

Inventory Management: Keep track of all assets, visualize the network by location for better clarity, and align inventory between systems automatically. Get the most accurate inventory with the most advanced inventory management in the industry.

Invoice Management: Collect, validate, process, and pay your invoices, using Calero invoice and bill pay automation, best practices, and industry experts.

Reporting and Analytics: Get the big picture and drilldown to access granular data beyond what vendor portals provide. Custom analytics allow users to visualize anything within the TEM database and gain insight.

Audit & Optimization: Automated dispute management, usage-based optimization, and in-depth benchmarking tools together expose inaccuracies, inefficiencies, and opportunities to save.

Why Calero.com?

- Easiest and fastest to implement
- Rapid time to value
- Proven ROI
- Consumer-based experience with enterprise-grade security
- Strategic integrations
- Configurable technology
- Industry-leading SLAs and advanced XLAs
